

A. Content & Audience

1. Did peers understand the purpose of your product and what problem it solves?

Yes, they understood it right away. Everyone knew my site was made to help URI students find good study spots without walking around campus stressed or guessing if a place is full. They said the purpose was really clear as soon as they clicked through the pages.

2. Did they clearly understand who the site is for?

Yeah, they did. They understood that it was meant for URI students, especially people who are new to the school, commuters, or anyone who wants to find quiet places to do work.

B. Design

3. What feedback did peers give about your planning and design elements?

People liked how everything was organized and how each page had one main goal. They thought the layout was clean and easy to follow because the whole point of the website was to not stress people out, so I wanted it to be simple and not too much on the eye.. They also said the light content boxes against the dark background looked nice and made it easy to read.

4. Did they find your structure, navigation and visual layout effective?

They said the nav bar made it simple to move around, and that the overall layout made sense. A couple people mentioned maybe adding a little more spacing on mobile, but overall they thought the visuals were solid.

C. Development

5. What feedback did peers give about your site's code-driven features or interactivity?

They really liked the interactive parts, the ratings, reviews, and FAQ form. They said those features made the website feel more like an actual product instead of just a class project.

6. Did they identify any issues with responsiveness, layout or broken behavior?

There wasn't anything major, but a few people noticed that on smaller screens some sections get tight or stack too close together. And they mentioned that the forms should stop users from sending empty inputs.

7. What accessibility feedback did you receive?

Mostly just to make text a little bigger on phones and make sure the labels on forms are really clear for everyone.

D. Overall Site

8. How did visitors rate the overall appearance and usability of your site?

They rated it pretty positively. They thought it was easy to use, looked clean, and was straightforward. A lot of people said it didn't feel confusing at all.

9. What did peers identify as the strongest part of your website, and why do you think that aspect stood out?

Most people said the strongest part was the interactive features, especially the reviews and the way the pages update. I think it stood out because that's the part that makes the site feel useful and more "real."

10. What improvements did they recommend?

- better form validation
- a little better spacing on mobile
- maybe adding more visual indicators or icons for different study spot features

E. Action Plan

11. What two improvements will you make based on their feedback, and how will you implement them?

1. Add better form validation

I'm going to add required fields and checks so people can't submit blank forms. This will make the site feel more complete and avoid empty reviews or questions.

2. Fix up spacing and sizing on mobile

I'm going to adjust the CSS so the spacing looks cleaner on phones and some text is slightly bigger. This should make the mobile experience easier to read and more accessible.
